FUNGUS

What problem is the
scientist trying to find?

- The scientist are trying to identify different fungi by identifying differences in the structures of the fungi.
- 

Why is this an important problem?

- Its an important problem because fungi is important for food, for medicine, and also causes plant diseases.
- 

How can we help?

- By making a model by showing the structure and differences of the fungi.
 - Also identify more accurately and automatically.
- 

Data and Model
