

SAGUARO

By Aaron and Emilio

PROBLEM

- How do they grow?
 - Why do they grow so slow?
 - Why do they live so long?
 - What is their contribution to the environment?

WHY IS THIS IMPORTANT

- Some animals will have no place to call home, or to store food, if the saguaro disappears.
- Also if we discover the reason why they live so long in a dry environment, we can use that info to make other plants live longer.

How can we help

- We, computer scientist can make computerized models for the scientist to study their height, angle and, structure.
- And by doing this we further our knowledge of the great saguaro cactus and help it along in the not so distant future.

Data and models
