Mia Avelarde

What is the problem?

- The biologists are trying to find the differences between fungi.

Why is it important?

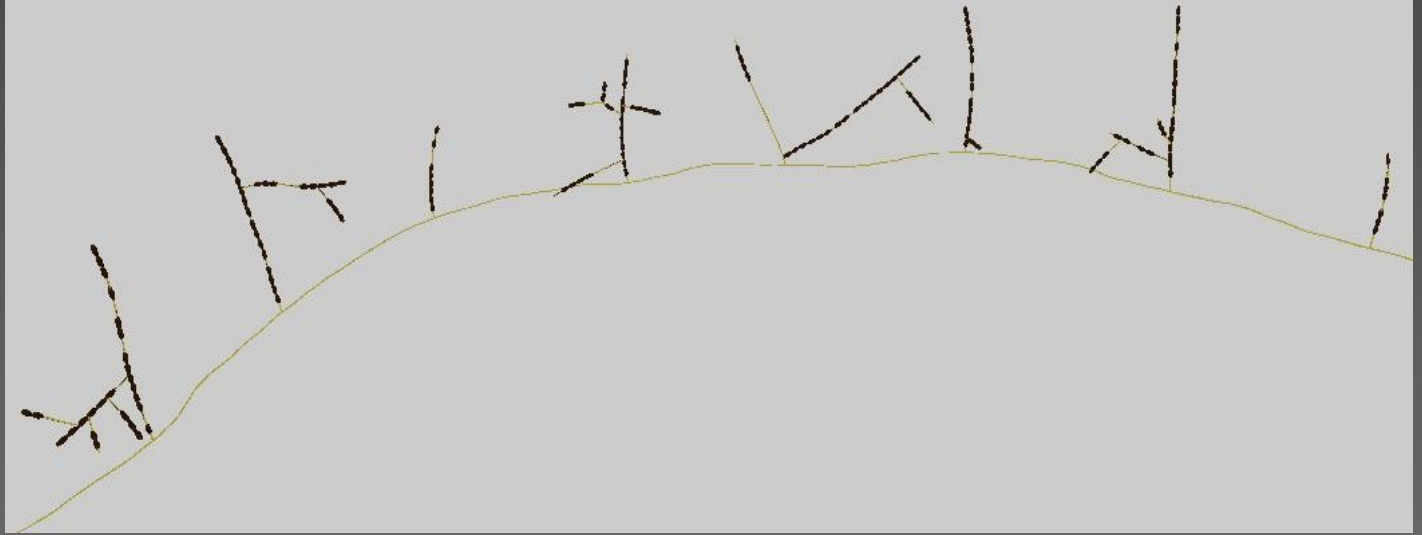

- > Fungi can be used as food such as yeast and mushrooms.
- > Fungi can be used for medicines!
- > Fungi can cause diseases such as athlete's foot, ring worm, and moldy food.

How can we help?

- Computer scientists can help biologists by using models to automatically find differences between fungi.

Fungus data & models.
