The fungus lab

- In this lab they studied alternaria fungus
- This fungus causes mortality in plants/lettuce
- They are trying to find a cure
Why is this important??

- This problem is important to solve because of the growing demand for vegetables.
- Lettuce and tomatoes are important parts of the American lifestyle.
How can we help

- We can find a cure to reverse or prevent the causes of alternaria fungus.
- Using microscopes to take pictures and analyze samples we understand how the fungus grows.
- Using these pictures we can create 3-D models to study the fungus in further detail.
3-D models we generated
